Electrical identification labels from TEXTIT

TEXTIT supplies your complete identification solution, such as electrical labels to clearly identify cables, wires, switches, panels, and a range of other products for electrical applications.

If you are in need of heat shrink markers, cable tags, self-laminating labels, or panel identification labels, TEXTIT has you covered.

Our manufacturing facilities have the most modern and progressive state of the art machinery and materials to satisfy demands for higher quality products with a reduced cost and quick delivery on your identification products.

Heatshrink Markers

Thermal transfer printable heat shrink sleeves are highly versatile, providing high quality marks which are suited to a variety of applications.

Continuous Sleeving

Our continuous flattened tubing is available in a variety of grades, shrink ratios and colours.

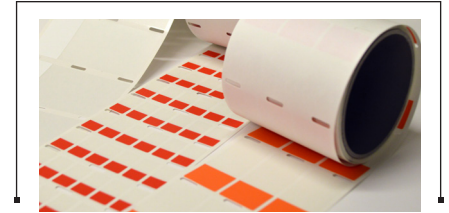

Cable Tags

Cable tags enable you to create clear, cable identification tags for both indoor and outdoor applications. They can be attached to a wire, cable, or bundle using cable ties.

Raised Labels

These panel plates are printed using thermal transfer printing and replace the need for engraved plates. Available in many colours and sizes, for electrical components and panels, junction boxes and instrument panels.

Self-Laminating Labels

Self-laminating labels offer an inexpensive way to identify wires and cables. These labels wrap over themselves, protecting the printed surface from solvents and abrasives.

Thermal & Laser Labels

Printable blank labels offer a nearly unlimited selection for your labeling needs. Durable print images make these the ideal labeling solution.
